

Heavy Duty Construction Steel Scaffolding Coupler High Strength EN74-1 Silver

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: china tianjin
- Brand Name: scaffolding coupler
- Certification: SGS
- Model Number: BM201
- Price: 4.5-8.5
- Packaging Details: In bundles
- Delivery Time: 15-25
- Payment Terms: TT/TC

Product Specification

- Color: Silver
- Application: Construction
- Material: Steel
- Package: Container
- Name: Scaffolding Coupler
- Feature: High Strength
- Standard: EN74-1
- MOQ: 1000
- Highlight: **High Strength Scaffolding Coupler,
Silver Scaffolding Coupler,
EN74-1 Scaffolding Coupler**

Product Description:

The Scaffolding Coupler is an essential component in the construction and maintenance industries, providing a robust and reliable means to connect scaffolding tubes securely. Manufactured with high-quality Japanese steel, these couplers are designed to endure the rigors of heavy-duty use while maintaining structural integrity. With a focus on safety and durability, the Scaffolding Coupler is an indispensable tool for building temporary structures with confidence and efficiency.

Packaged securely in containers, these couplers are delivered ready for immediate use on-site. The containers ensure that the couplers are protected from damage during transit and are easily transported to various locations. This packaging solution not only simplifies the logistics of delivery but also makes storage and inventory management of the couplers more convenient for the end-user.

The Scaffolding Couplers are renowned for their high strength, a feature that is critical in ensuring the safety and stability of scaffolding structures. The steel material used in the manufacturing process is selected for its high tensile strength and durability. This robust construction allows the couplers to withstand the stresses and loads encountered in various construction environments while ensuring a secure connection between the scaffolding tubes.

Adherence to the BS1139 Standard is a testament to the reliability of these couplings. The BS1139 Standard is a regulatory benchmark for scaffolding components, and compliance with this standard means that the Scaffolding Coupler meets the stringent requirements for quality, safety, and performance. By adhering to these standards, the couplers guarantee compatibility with various tube diameters and ensure a safe and secure fit for all scaffolding needs.

With their sleek silver color, the Scaffolding Couplers not only perform exceptionally but also maintain a professional appearance on the construction site. The silver color is a result of the galvanization process which provides an additional layer of protection against corrosion, extending the lifespan of these couplers even in harsh weather conditions. This color coding also aids in the quick identification and sorting of different scaffolding components during assembly and disassembly processes.

The Scaffolding Coupler is an integral part of the high-quality Japanese scaffold accessories ecosystem. These accessories are engineered to work seamlessly with the couplers, providing a comprehensive scaffolding solution that emphasizes safety, efficiency, and ease of use. With these Japanese Steel Pipe Connectors, constructors can expect a reduction in assembly time while benefiting from a secure and stable platform from which to work.

The Scaffolding Coupler's compatibility with various sizes and types of scaffolding tubes makes it a versatile choice for a wide range of applications. Whether for construction, maintenance, renovation, or event staging, these couplers provide the necessary flexibility to create custom scaffold structures. The ease of assembly and disassembly is a key advantage, allowing workers to quickly adjust the configuration of the scaffolding to meet the specific requirements of each project.

In conclusion, the Scaffolding Coupler is a premium product that combines the best of Japanese steel with the assurance of BS1139 Standard compliance. The high strength, durability, and versatility of these couplers make them a staple in the construction industry. Packaged in containers for easy transportation and storage, and finished in a protective silver color, these couplers offer practicality and performance that is unmatched in the market. They serve as a critical component of the high-quality Japanese scaffold accessories line, providing the reliability and safety that professionals in the industry demand.

Technical Parameters:

| Attribute | Details |
|-------------------|---------------------|
| Surface Treatment | Galvanized |
| Color | Silver |
| Name | Scaffolding Coupler |
| Feature | High Strength |
| Material | Steel |
| MOQ | 1000 |
| Package | Container |
| Standard | EN74-1 |
| Application | Construction |
