

China Factory Hot Dip Galvanized Steel Pipe / GI Pipes Round Galvanised Pipe Scaffolding Tube For Construction

Our Product Introduction

for more products please visit us on bythaiscaffold.com

Basic Information

- Place of Origin: China
- Brand Name: Bythai Scaffolding
- Certification: SGS ISO
- Model Number: BT201
- Minimum Order Quantity: 1000
- Price: \$10-\$85
- Packaging Details: In bundles
- Delivery Time: 10-15 days
- Payment Terms: TT/TC
- Supply Ability: 1000tons per month

Product Specification

- Thickness: 3.2mm
- Name: Galvanised Scaffold Tube
- Standard: EN39
- Weight: 6.4kg/m
- Surface Treatment: Galvanised
- Yield Strength: 245N/mm2
- Tensile Strength: 420N/mm2
- Diameter: 48.3mm
- Highlight: Round Galvanised Steel Pipe,
Hot Dip Galvanized Steel Pipe,
Construction Galvanized Steel Pipe

Product Description

Technical Parameters:

Name:	Galvanised Scaffold Tube
Material:	Galvanised Steel
Surface Treatment:	Galvanised
Standard:	EN39
Diameter:	48.3mm
Thickness:	3.2mm
Weight:	6.4kg/m
Yield Strength:	245N/mm ²
Tensile Strength:	420N/mm ²
Application:	Scaffolding

Applications:

With a yield strength of 245N/mm² and a tensile strength of 420N/mm², this Galvanised Scaffold Tube is strong and sturdy. The weight of the tube is 6.4kg/m, and it adheres to the EN39 standard. The main application of this product is in scaffolding.

Galvanised Scaffold Tubes are used in construction and maintenance work. They are used to create a temporary structure that helps workers to access areas that are difficult to reach. The pipe scaffold tube is an essential component of a scaffold, and it provides the necessary support. It is also used as a bracing component to ensure the stability of the scaffold structure.

The bs1139 scaffolding tube is another commonly used tube in scaffolding. It is used together with the pipe scaffold tube to create a sturdy scaffold structure. The bs1139 scaffolding tube is known for its durability and strength, and it is widely used in the construction industry.

Scaffold aluminum tubes are also used in scaffolding. They are lightweight and easy to handle, making them ideal for use in areas where the weight of the scaffold is a concern. The aluminum tubes are also resistant to corrosion, making them suitable for use in outdoor environments.

In conclusion, the Bythai Scaffolding Galvanised Scaffold Tube is a high-quality product that is widely used in the construction industry. With its strength and durability, it provides the necessary support for scaffolding structures. Whether you're using the pipe scaffold tube, the bs1139 scaffolding tube, or the scaffold aluminum tube, you can be assured of a reliable and safe scaffold structure.
